Watersports + Diving Excursions

Dhigali House Reef

Dhigali Maldives is surrounded by a beautiful house reef with good coral life and a lot of different fish species can be found. Raa Atoll is famous for its' great dive sites and the reefs are generally in very good condition. Divers as well as snorkelers can experience great underwater fauna.

The dive centre is located in the middle of the northern side of the island close to the lagoon. In front of the dive centre there is a jetty from where the diving and snorkeling boat trips start. Diving is also possible guided or unguided from the house reef.

The reef starts in about 3-4 meters from the beach, quickly dropping to a depth of around 20 - 25 meters. Divers can discover a big range of different hard corals like table corals, brain corals, and many more.

Divers and snorkelers will encounter large schools of fusiliers, big groupers are circling around the reef and many other fishes like tuna, napoleons, eagle rays, black tip reef sharks and many more can be seen.

A spectacular dive can be done on the south western side of the house reef - due to the distance this dive will only be possible to be reached by diving boat and will be scheduled on regular basis. This part of the reef is overwhelming, amazing coral life and lots of different fishes. Small caves can be found here, nicely covered by corals, lion fish, eagle rays, turtles, and many lobsters can be seen. During the season encounters with manta rays are possible, as well as nurse sharks and lemon sharks.

For snorkelers the south western side of the house reef is very good, too. Big schools of banner fish, bat fish and all other marine life can be found here, as well as baby sharks and eagle rays.

The house reef of Dhigali is definitely a highlight for everybody loving the marine life.
